

1. (4 points) A program contains the following function.

```
void Display (int arg1, double arg2, char arg3)
{
    cout << "Here are the values: " << arg1 << " ";
    cout << arg2 << " " << arg3 << endl;
}
```

Write the statement that calls the procedure and passes the following variables to it:

```
int age;
double income;
char initial;
```

2. (6 points) Write the definition for a function called `HalfOff` that accepts an argument and returns a value that is half of the argument.
