

1. Look at the following definition.

```
void GetNumber (int & n)
{
    cout << "Enter a number: " ;
    cin >> n;
}
```

In this function, the parameter n is a reference variable. Rewrite the function so that n is a pointer.

2. Look at the following code.

```
double value = 29.7;
double* ptr = &value;
```

Write a cout statement that uses the ptr variable to display the contents of the value variable.
