Loop Practice

- Write a while loop to print the odd numbers backward from 99 to 1. You will need to declare and initialize any variables you need.

- Write a do-while loop to sum the even numbers from 2 to 100. You will need to declare and initialize any variables you need.

- Write a for loop to average the numbers from 1 to 100. You will need to declare and initialize any variables you need.

- Write a program segment that has the user enter a number between 1 and 100, and have the program validate the data, and allow the user to enter a number until a valid number is entered.

- Write a loop that lets a user enter test scores to be averaged. The loop should end when a sentinel value of −1 is entered.
